

The Turkish language itself, as already said, is simple and easy, but the style, especially that of the Osmanic Turkish, is exceedingly involved, complicated, and obscure. The order in which the words are placed is often in every particular the very reverse of that in ours and other languages generally. The pronunciation of the Turkish is by no means disagreeable to the ear; it is majestic, noble, and harmonious, while the Arabic is extremely coarse and harsh.

In conclusion we offer the following sentiment as characteristic of the Turkish language, proverb, and moral. The proverb is written as it would be pronounced to the English ear. "Eyee-lík étt, denezéy bráck, báhlik bilméss isséy, Kháh-lik bileer;" which means, "Do good [or act well], and throw it into the sea; if the fishes ignore it, the Creator will know it." The beauty of this proverb consists especially in the parallelism of the words *báhlik*, *the fish*, and *Kháh-lik*, *the Creator*.

ARTICLE IV.

THE LANGUAGE OF ISAIAH XL.—LXVI.

BY REV. WM. HENRY COBB, UXBRIDGE, MASS.

HOWEVER convenient it may be in a discussion to shift the burden of proof upon one's adversary, it is a great gain to be able to assume the burden, and carry it successfully. If those who deny the unity of the Book of Isaiah are willing to stake the question on the actual phenomena in respect of diction which the sixty-six chapters present, those who defend the integrity of the book may abandon a merely apologetic attitude. They need no longer assert that the two main portions of this book cannot be proved to be the work of separate authors; they should undertake to prove the contrary. In a previous Article¹ the attempt was made to show that the vocabulary of the last twenty-seven chapters presents feat-

¹ Two Isaiahs or One? — Bibliotheca Sacra, April 1861.

ures, especially in its rare words, which are easy to explain if the author was a contemporary of Hezekiah; and difficult to explain if he was a contemporary of Cyrus. In the present Article the reader is invited to examine for himself the entire vocabulary of these chapters (proper names alone being excluded), and draw his own inferences. Out of the 1310 words used by Isaiah B (chaps. xl.-lxvi.) 367 were regarded by the present writer as so common at all periods of the language that they would prove nothing on either side of the question before us; hence no attempt was made to count and classify their occurrences. But as the proper limit of this list is a matter of judgment, the words are given in full, without note or comment except the mere statement appended to six of them that they are not found in Isaiah A (chaps. i.-xxxix.). From the remaining 943 words a Hebrew index has been constructed, exhibiting the number of occurrences of each word and approximately the periods of its use. Two different classifications are presented, according to the plan explained in the previous Article, which we will now repeat.

The first method employs the first five letters of the alphabet, which are printed as far as possible on a line with the Hebrew word. The small figures above a letter indicate the number of times the word is found in that class. The books (in the order of the English Bible) from Genesis to Numbers inclusive are represented by *a*; Judges to 2 Samuel, also Psalms I. and II., by *b*; 1 and 2 Kings, Psalms III., Proverbs, Jeremiah, Lamentations, Hosea to Zephaniah, constitute class *c*; Deuteronomy, Job, Ecclesiastes, and Psalms IV. belong to *d*; leaving for *e* 1Chronicles to Esther, Psalms V., Canticles, Ezekiel, Daniel, Haggai to Malachi.

The second method takes seven letters (printed above the line); *a* and *b* remain as before, and hence are not repeated; *c* comprises only Hosea to Zephaniah; *d* has, in addition to its previous contents, Proverbs, Jeremiah, Lamentations, and Daniel; *e* is restricted to Ezekiel, Haggai, Zechariah, and Malachi; *f* denotes 1 and 2 Kings and Psalms III.; *g*,

1 Chronicles to Esther, Psalms V., and Canticles. It will thus be seen that *f* is derived from the former *c*, and *g* from the former *e*. Often the grouping remains unchanged, or only partly changed, e.g. in אָרָר and אָרָר.

Isaiah A belongs with *c*, and B with *d*; but as the index cites chapter and verse for all the passages in Isaiah, these are not included in either classification by letters. This fact must be borne in mind when one wishes to compare the vocabularies of the two groups of prophets in the second system of classification. Take for instance the first word of the index, אָרָר. We find in the upper line *e*⁸, showing that the word occurs three times in the prophets of the Captivity and Return; but though the letter *c* is absent, אָרָר is found four times in the prophets before the Captivity, namely, in the four passages of Isaiah A which are cited. The advantage of this reference to Isaiah by chapter and verse is obvious. The sign of equality shows that a given word is found in both A and B. The critic, having each passage before him, can erase this mark whenever it occurs with a passage in A which he considers suspicious. But since Gesenius has shown that the passages supposed (by him as well as others) to be spurious must have been written by the author of chapters xl.—lxvi., the critic must beware of becoming hoist with his own petard. For example if he regards chapter xxiv. as interpolated he will strike out the parallelism between A and B in such words as אָרָר. But in that case he must insert in the index a new class of words like אָרָר (xxiv. 16 = iii. 9, 11, etc.), which the present writer considers as belonging only to A. The theory of Isaian unity would therefore gain as much by this process as it would lose. It will be observed that the index classifies each verb according to its separate conjugations: Kal, Niphal, etc. As the meaning of a word is often so different in these various species, it was thought important to keep these distinct. When only one species is given, as in the first word of the list, the word is found in no other species.

With these explanations, the reader will easily become

familiar with the index. The value of this list is not confined to the student of the Isaian diction. Here are nearly a thousand Hebrew words, occurring infrequently for the most part, and classified on two different principles. It cannot but be possible, by a careful study of this material, to obtain assistance in the great task of assigning the writers of the Old Testament to their proper periods. Much light may be thrown incidentally upon the vexed questions of the authorship of the Pentateuch, of Job, etc. But the main design of the writer will be accomplished if his work shall assist in fixing the authorship of the twenty-seven sublime chapters which have formed the basis of this index. The world is so deeply indebted to the author of those chapters, her literature has been so enriched by them, that no pains should be spared to dispel, if possible, the mist that has gathered around them in these latter years. At present the writer leaves the index to the judgment of competent scholars, with merely a few general remarks.

Out of the 948 words included, 476, a little more than half, are found in Isaiah A. Out of the 367 words excluded from the list, 361 occur in A; making 837 of A's words among the 1310 in B, or nearly two thirds, a much greater fraction than the proportional part of B's words used by any other writer. This, too, is as great a proportion as we ought to expect on the hypothesis of the unity of the whole book, bearing in mind the greater age of the prophet when the latter section was written. Another point to be noticed is that we find very few instances, comparatively, of words in the index which occur in Isaiah A. in the suspected portions *only*. I have not taken pains to count the whole number, but in the letter *a*, out of seventy-six words in all, forty-six are found in A, or one to every page, and of these but six occur in the suspected parts only. The absolute number and the ratio per page in each of the seven classes (according to the second classification) is as follows: Of the 76 words *a* has 55, or one to 5.2 pages; *b*, 51, one to 4.9 pages; *c*, 56, one to 1.6 pages; *d*, 56, one to 5.1 pages; *e*, 31, one to 3.5 pages; *f*, 85, one to 3.6 pages; *g*, 43, one to 4.7 pages.

The same decided result appears here as in our former tests. Isaiah B clings to A with as close an affinity as Bulgaria to Eastern Rumelia. These experiments may be varied in many ways. It may be well at some time to give statistics as to the comparative fulness of the Isaian vocabulary and the comparative poverty of the period of Ezra; or to take a common stock of ideas (among those less frequently employed), and examine how differently these were clothed in words at the two periods indicated, inquiring again whether this class of evidence points to a single or a dual authorship. Modern science ought to become less and less polemical; if it is not so it is false to its own principles. The way to treat a man who fails to see what you see is not to rail at him, but to pour in the light. That will be a happy day when religious discussions lose out the controversial aspect, and become simply investigations, all parties to which are equally eager to buy the truth. And if among those investigations the scattered fragments of the peerless book of Isaiah, which have been tossed about the learned world for a century past, shall be gathered up and fitted together, so that a century hence the tokens of their unity shall be visible to all, he will be a happy man who shall be able to set up the re-united scroll in its ancient niche of honor within the temple of revelation, and write above it, "What God hath joined together let no man put asunder."

List of words found in Isaiah B, but not included in the Hebrew Index.
