Observations on Syntax 
and Meter in Lamentations

The Hebrew Verbless Clause in the Pentateuch, by Francis I. Andersen, is an exceptionally significant step forward in Hebrew syntax. Andersen reaches important new conclusions concerning word order in verbless clauses, showing that varieties of word order are associated with differences in the semantic relation between subject and predicate, in the relation of a clause to other clauses, and so on. The study is commendably explicit and thorough; all the verbless clauses in the Pentateuch are studied and classified.

Andersen's monograph is therefore a good basis for comparative study of syntax. The present investigation is devoted to the book of Lamentations, a work which may claim interest because it is datable within rather narrow limits, in the view of most scholars, and because it is very widely acknowledged to be poetry and to exhibit a particular meter, labelled "Qinah meter" by Budde, in its first four chapters. In the first part of this paper, the verbless clauses in Lamentations are compared with those of the Pentateuch as classified by Andersen in his recent monograph. In the second part, the order of postverbal elements in verbal clauses are compared with the patterns of order in Genesis, as classified by Andersen in an unpublished work. The intention is to find answers to these questions: Are there differences in the syntax of this poetic work as compared with a large body of mostly prose material? If the poetic text departs from the norm, does it do so in conformity with a particular metrical or rhythmic pattern?
VERBLESS CLAUSES IN LAMENTATIONS

The present writer has attempted to follow Andersen’s model as closely as possible in separating “verbless clauses” from other types. Sentences with quasi verbal elements such as yēḏ and ʿqd have not been included. In addition, some strings that are possibly verbless clauses have been omitted as being too dubious textually to permit analysis. These are 1: 12a (lō’ . . . derek); 2: 4ab (niṣṣēḇ yʾmīnō). 4: 13 is understood as joined to 4: 14; in any case, it is not a verbless clause, since it does not apparently contain any predication. In 3: 19 and 3: 26, certain emendations would yield verbless clauses, but other solutions to the textual problems might also be proposed; so these examples have not been included. In the following cases, where there is no textual problem, strings have been omitted as not constituting clauses, since they do not seem to contain a subject and predicate: 2: 15c (kīl-lat yōḥel māsōs lʾkōl hāʾārēs); 3: 23 (bēʾdāšim lābbehʾārīm); 4: 15 (fāmē). Two related problems arise in poetic lines where parallelism is present. First, in parallelism, a verb may be expressed in the first colon and omitted from the second. The second colon is then formally “verbless,” but is not so in sense, since the verbal predicate must be understood also in the second colon; or else the whole line is to be read as a single verbal clause of unusual structure. On this basis, 5: 2 (bāḥṭēn hʾnokrīm) and 1: 20 (bābbagit kām-mīnūl) have been omitted; the latter is also suspect textually. 5: 3 (tʾim-mōṭēnū kʾ-atlānīl) is problematic: should one supply a form of hāyāh as in the first colon? This example has been included as a verbless clause here. The second problem arises where a poetic line can be interpreted either as one verbless clause with a compound element or as two separate clauses, assuming ellipsis of some element or elements in the second. The three lines of this sort have all been interpreted here as containing two verbless clauses.

There are thirty-one verbless clauses in Lamentations. Almost all agree with the rules as stated by Andersen. The following exemplify his rule 1, that the order is S(subject)-P(predicate) in clauses of identification, where both S and P are definite: 2: 15c; 2: 16c; 3: 1; 3: 24; 3: 63. In 3: 24 (heqiq Yhw), however, it is difficult to be certain as to which is subject and which is predicate.

Rule 3, that the order is P-S in a clause of classification, where P is indefinite relative to S, is exemplified in 1: 22ca; 2: 13c; 3: 10 (twice); 3: 25 (twice); 4: 7b. Rule 5, that the order is S-P when the predicate is a participle, is exemplified in 1: 4 (four times); 1: 11 (twice). Five other verbless clauses in Lamentations are of the sort where P is a prepositional phrase, for which no rules as to normal order are framed by Andersen (see pp. 49-50 of his monograph): 1: 9a; 2: 9b; 3: 62; 5: 3; 5: 16.

One example is clearly abnormal (though not unparalleled in Andersen’s corpus), a case where a participial predicate precedes the subject: 1: 21a (kl neʾrmāḏāh ʿāḏi). Possible explanations for such abnormal ordering are given by Andersen on page 48 of his book.

One other verbless clause calls for special comment: 1: 18 (ṣaddāq hāʾ Yhw). This might be taken as a sentence of classification, with normal order (P-S): “He, Yahweh, is righteous.” But if so, one must take hāʾ to be the subject, and Yhw as in apposition to hāʾ. The only parallel for such an unusual apposition seems to be Ezek 33: 8, and it is neither exactly the same as the present case nor beyond question textually. An alternate analysis would be to take ṣaddāq as the subject, resumed by the pleonastic pronoun hāʾ. On this line, one would also have to assume that ṣaddāq, though without the article, is definite, since it is almost equally unparalleled for an indefinite subject to be resumed by a pleonastic pronoun. The line would mean: “The righteous one [in this issue] is Yahweh, because I [the other party] defied his command.” Perhaps Lamentations at this point preserves older poetic practice, in which the definite article is seldom used; note that ṣaddāq is the first word in a stanza that must begin with ṣādā. A rather close parallel is Is 9: 14: ṣāḏēn ʾānʾśāʾ pāʾlīm hāʾ hāʾārēs ʾərāʾel hāʾ hazzānāb, “[The] elder and [the] honored man is the head / And [the] prophet who teaches falsehood is the tail.” If this latter analysis of Lam 1: 18 is correct, the clause fits Andersen’s rule 2, according to which a pleonastic pronoun comes before the predicate in a clause of identification.

To sum up, Andersen’s description proves to fit word order in the verbless clauses of Lamentations very well. There is no evidence that the author or authors practiced any greater freedom than did the writers of the Pentateuch. Though the body of clauses for comparison is small, it does contain examples of all the principal rules in Andersen’s study.

The Order of Sentence Elements Following the Verb in Lamentations

In many verbal sentences in Hebrew, two or more sentence elements follow the verb. These may be an independent pronoun serving as subject, a nominal subject, a nominal direct object, and so on. In a portion of his unpublished work Studies in Hebrew Syntax, Andersen has tabulated the order of these sentence elements relative to each other, and gives a matrix showing the order normally followed. Only a small percentage of sentences depart from this normal order. It is to be hoped that Andersen will soon publish a study of the Hebrew verbal sentence; in advance of that, the present writer will cite certain of the data from Andersen’s work for comparative...
purposes, since there is no similar body of tabulated data available and
since, as the reader will readily see, the evidence cited is factual and not de-
pendent on any particular theory as to Hebrew syntax.

In Genesis, where a verb is followed by both a nominal subject (NSubj)
and a prepositional phrase modifying the verb (PrPh), the nominal subject
precedes. This is true in 115 of the 122 examples in the book. Where a
verb is followed by a nominal direct object (DObj) and a prepositional
phrase, the direct object precedes. The pattern is followed in ninety-two
of 103 sentences in Genesis.

In Lamentations there are thirty-two verbal sentences with a nominal
subject and a prepositional phrase following the verb. In twenty-one of
these, the order is the one normally found in Genesis: V-NSubj-PrPh.7 In
eleven, the order is the opposite: V-PrPh-NSubj.8 Though several of the
sentences are rather difficult and hence uncertain, the general picture is
clear: a much higher proportion of sentences—about one-third of the total
—show abnormal order than is true in Genesis.

A similar picture is presented in the second case. There are twenty-six
verbal sentences in Lamentations in which both a nominal direct object
and a prepositional phrase follow the verb. In fifteen cases, the order is
that normally found in Genesis: V-DObj-PrPh.9 In eleven cases, the ab-
normal order occurs: V-PrPh-DObj.10 Though the order of other sorts of
postverbal elements might also be tabulated, the number of examples in
Lamentations seems too small to permit any conclusions. The above two
types are the most common, and occur sufficiently often to show a marked
clear distinction to the situation in Genesis.

Andersen's tabulation for Genesis showed that verbal sentences with more
than two postverbal sentence elements follow the same pattern as those
with two, though there was a somewhat higher proportion of sentences with
abnormal order (345 of 409 exhibited normal patterns). In Lamentations,
only seven of twenty-four sentences of this sort show "normal" order,
while seventeen are abnormal.11 In Genesis, the nominal subject ordinarily
precedes the nominal direct object, and the latter precedes any adverbial
prepositional phrase which is present. Most of the sentences from Lamen-
tations which are classified here as abnormal show some departure from this
pattern.

One hypothesis which suggests itself almost inevitably is that these syn-
tactic abnormalities in Lamentations have to do with meter. The whole
book is poetry, and ever since K. Budde's "Das hebräische Klagegedicht" (1882),12 most scholars have recognized that the dominant metrical form
in Lamentations chapters 1–4 is a line in which the second of two parallel
cola is shorter than the first, whether one prefers to call this a Qinah verse,
a "five" (Fünfer),13 or a "brachycatalectic" line of some sort.14 Though not
all the lines are of this type, many are. Even though the norms of this kind
of verse have not been defined with any great precision, it may be possible
to determine whether or not some clear relation between meter and syntax
exists. Specifically, we may ask whether the poet adopts abnormal order
only or primarily when the meter demands it—that is, to achieve the un-
balanced line characteristic of chapters 1–4.

This seems not to be so. Of the eleven cases of the abnormal order V-PrPh-
NSubj, five15 constitute only a single poetic colon, not a whole line, and
therefore the Qinah meter seems unaffected even if the elements are
reversed. Thus, for example, 2: 9a, lāḇšā’ā bāḇārēs šē’ārēyāhā seems to work just
as well if we make it lāḇšā’ā šē’ārēyāhā bāḇārēs. In four other examples (1:
6a; 2: 20c; 2: 22b; 3: 31), which cover a whole poetic line, metrical relations
do not seem to be disturbed if we change to normal prose order, thus 2:
1’m yēhārēy b’miqduš 1))*(dônōy kēhēn w’rabbī1! goes well as 1’n yēhārēy kēhēn w’rabbī1!
b’miqduš 1))*(dônōy. Only in two cases of eleven would the normal
prose order seem difficult from the standpoint of Qinah meter: 1: 1b and
1: 16b.

Similarly, eight of the eleven cases of the unusual order V-PrPh-DObj
would seem metrically acceptable if the normal prose order were restored.
Five of them comprise only a single colon (2: 4c; 2: 6a [textually very un-
certain]; 3: 16; 3: 29; 3: 53), and the others (2: 5c; 2: 6c; 2: 7b) would still
give a Qinah verse if the postverbal elements were transposed. Only 2:
2b; 3: 13; and perhaps 2: 3a seem rather difficult metrically if transposed.16

It is of course possible that greater refinement of our metrical conceptions
would show a correlation between metrical form and the order of postverbal
sentence elements, but the evidence gathered here does not show any ap-
parent relation. Though we must conclude that the author or authors were
freer in this aspect of syntax than were the writers of Genesis, we cannot
readily explain their practice as related to meter. One factor can be singled
out, however, as involved in a good many cases of abnormal ordering. This
is the tendency, already noted by Andersen with reference to Genesis, to
choose when the meter demands it—that is, to achieve the un-
balanced line characteristic of chapters 1–4.

Of the twenty-two examples of abnormal order cited above, the following
nine sentences illustrate this tendency: 1: 1b; 1: 16b; 2: 2b; 2: 3a; 2: 5c;
2: 6c; 2: 7b; 2: 20c; 3: 13. A preference for putting long or compound post-
verbal elements last in the sentence is especially noticeable in sentences
with three or more postverbal elements. Note, for instance, 2: 1b: hāšîlīk
mīṣšāmāyîm *tērēs tip’ēret gišrā’ēl, where the long direct object is put last.
Compare 2: 6b: sîkhāh Yhwh b’sīyyōn mō’ēd w’sabbāt. The compound
direct object is last, whereas in normal prose order the prepositional phrase 
"b'yayéyón would be last. In a similar way, this tendency is observable-in 
2: 1a; 2: 3b; 2: 10c; 2: 15a; 2: 16a; 2: 18b; 2: 19b; 2: 21a; 3: 44; 3: 46; 
3: 55; 4: 10b. Though judgment in this sort of question is inevitably some­
what subjective, it does seem that this type of patterning emphasizes the 
caesura in these lines, and also yields a second colon which is sufficiently 
long to fit the common metrical pattern of the poems. This seems especially 
clear in the four cases of V-PrPh-DObj-NSubj (2: 10c; 2: 15a; 2: 16a; 3: 46), 
where placing the subject last strongly emphasizes the division of the line 
into cola.

NOTES

versity, 1960. I am grateful to Professor Andersen for permitting me to make reference 
to this work.

3 Andersen, Hebrew Verbless Clause, p. 23, para. 10, does not include 'ágéh, "where?" 
in the list of quasi verbals, or in the list of interrogatives he gives elsewhere. On the basis of 
form, it presumably belongs with the quasi verbals; hence Lam 2: 12ab is not included here.

4 The proper classification of 'áy, "Woe!" is uncertain to me. On the basis of Prov 
23: 29, where it is clearly a nominal, I have understood it to be the noun subject of a 
verbless clause in 5: 16.

5 In Prov 10: 18 and 28: 24, however, a formally indefinite subject is resumed by hâ'.

3: 50; 3: 54; 4: 1b; 4: 6a; 4: 7a; 4: 8b; 4: 9a; 4: 14a; 4: 19a.

5: 9; 5: 21.

1a; 2: 1b; 2: 3b; 2: 6b; 2: 10c; 2: 15a; 2: 16a; 2: 18b; 2: 19b; 2: 21a; 2: 22a; 3: 44; 3: 46; 
3: 52; 4: 10b; 4: 17a.
