fair-faced on the inside surface. It is impossible without excavation to
tell what this may be: it is possibly the mouth of a large cistern at a
yet lower level, which had been filled up before the path took its present
direction. The channel from the tunnel in the upper scarp appears
intended to direct water to this supposed cistern.

(4) In the face of the cliff is cut a small tunnel into which it is just
possible to enter; out of this flows a stream of water that takes its rise
at the end of the tunnel (about 4 feet from the face of the scarp) in a
small fissure in the rock. The water falls into a trough, and is conveyed
thence into a second: the first trough is oval, the second rectangular.
They are beside the pathway, and are used for watering cattle. From
the second trough the water flows away over the surface of the ground.

(5) The last detail of the system is a small, square cave cut in the face
of the rock, at the eastern end of the scarp.

There is no indication whatever of the date of the rock-cuttings.

My attention was first directed to this spring by Dr. Peters, of New
York, who visited it with Mr. Hanauer. It does not seem to have ever
been fully described, though Mr. Hanauer (who has referred to it in the
Quarterly Statement of last January, p. 80) tells me it has been mentioned
by different writers under different names—'Ain el-Ghazal, 'Ain el-
Haramiyeh, and 'Ain el-Kassias. The last is the name under which it is
denoted in the Ordnance Map: there is no reference to it in the accom­
panying memoir. The true name, as Mr. Hanauer informed me, and as
I verified by several inquiries on the spot, is عدین القصعة 'Ain el-Kus'ah,
the “spring of the pot”—possibly referring to the circular foundation in
the middle of the pathway.

GREEK AND LATIN INSCRIPTIONS.

The Rev. J. E. Hanauer sends squeezes of three small Greek and Latin
inscriptions, for the readings of which we are indebted to Canon Hicks:—

1. A Greek inscription on a small marble slab, rather prettily carved,
broken in several pieces, but now forming part of the floor of a room in
the “Friends' Boys' School” at Ramallah. It is of unequal length,
one side being 1'65 cm. long, and the other 1'20 cm. only. The
breadth is 54 cm., the diameter of circular panels 27 cm. Mr. Hanauer
reminds that the stone, which was shown to him by Mr. Grant, the
Principal, is said to have been brought from Deir Diwan. It reads:—

† Ὑπὲρ ἀναπαύσεως Σηλήμωνος πρεσβύτερου.
“For the repose of Solomon, a Presbyter.”

Canon Hicks adds that the monument looks like part of a sarcophagus,
and that the writing is probably of the third century A.D.
2. *Two Latin Epitaphs.*—Mr. Macalister, who also sends drawings and readings, states that the Latin inscriptions were found in the grounds of St. George's College, at Jerusalem, in the course of digging to make a cistern. They were associated with small tomb-chambers belonging to the same necropolis as that containing the painted tomb described some years ago by Mr. Dickie (*Quarterly Statement*, 1896, pp. 305-310). The tombs were of no special interest. The slabs are now preserved in the reading room of St. George's College, and the drawings and descriptions we owe to the kindness of the Right Rev. Bishop Blyth:—

(a) D. M.  
**TARQVITIAE**  
**SELVANILLAE**  
**VIXIT MENS. IX**...  
**PATER EIVS**...  
D(is) M(anibus).  
Tarquitaiae  
Silvanilla.  
Vixit mens(es) ix...  
Pater ejus f(aciendum) c(reavit), or f(e)c(it).

"To the sacred shades of Tarquitia Silvanilla. She lived ix... months. Her father had (the tomb) made."

(b) D. [M.]  
**M* LORI**  
**VIXITA[N]**  
D(is) M(anibus).  
Manius Lori...  
Vixit a(n).  
......

"To the sacred shades. Manius Lori... lived... years ."

(a) is a limestone slab, 12½ inches long, 9½ inches broad, 2½ inches thick; (b) is a fragment of a slab of limestone more compact than the material of (a).
